FIG. 4

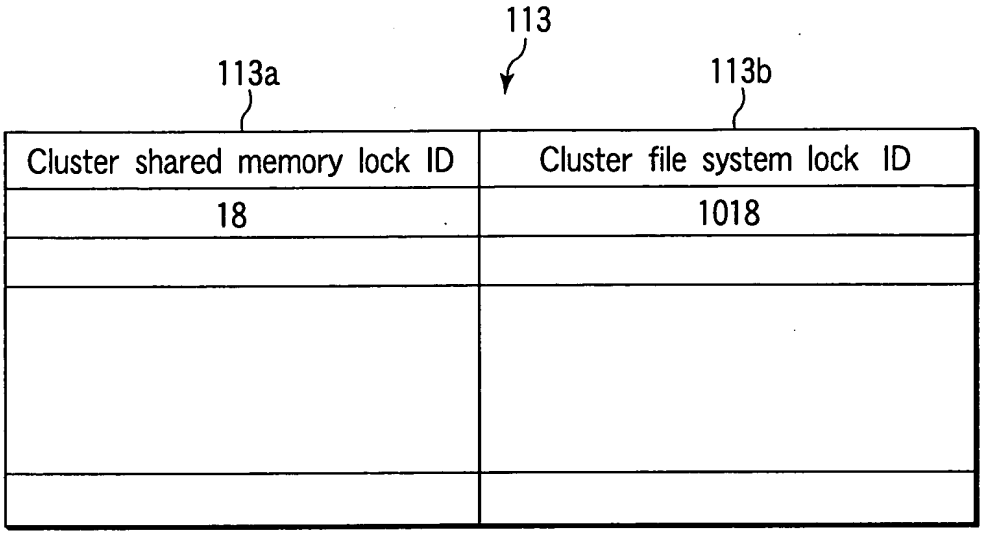

FIG. 5

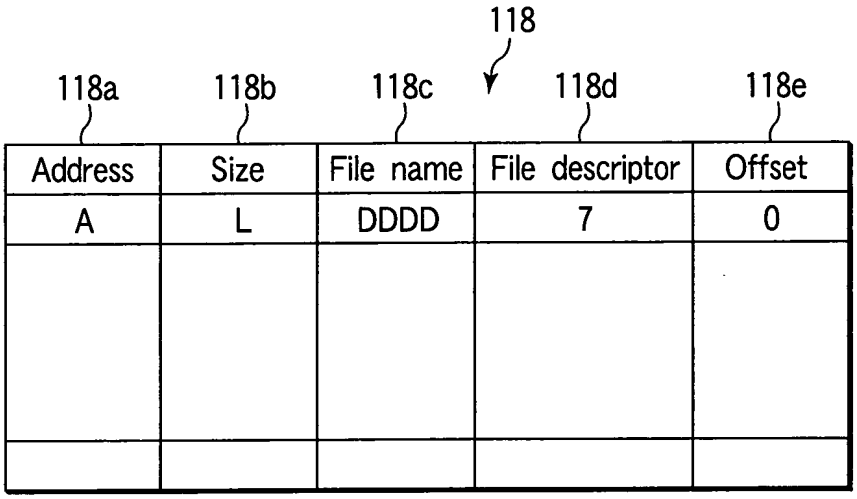

FIG. 6

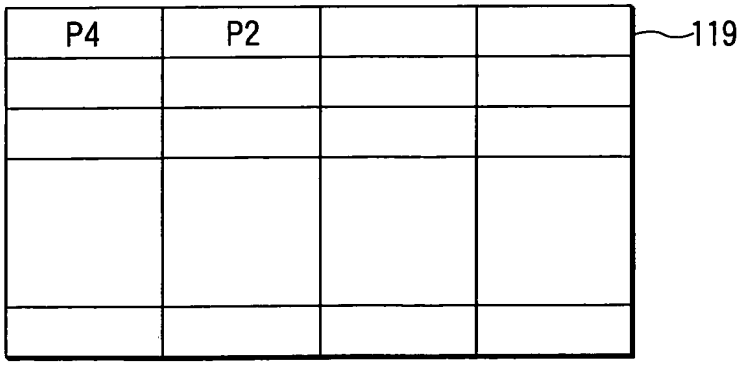
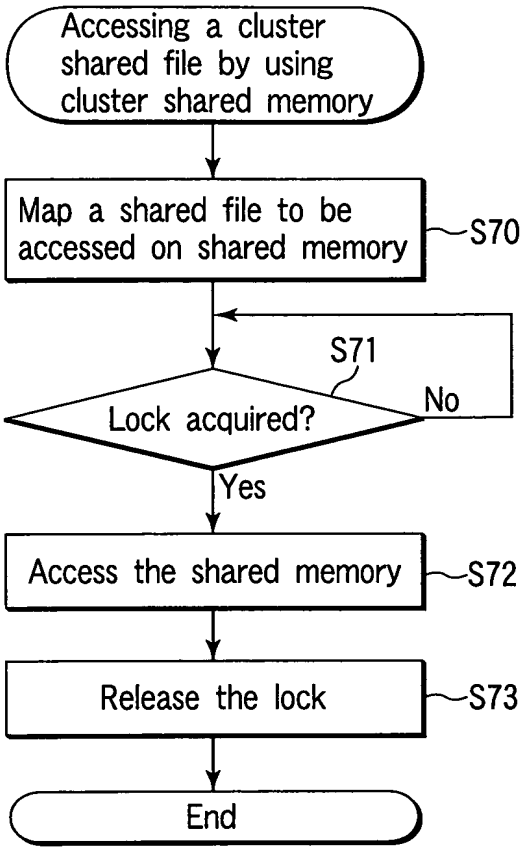
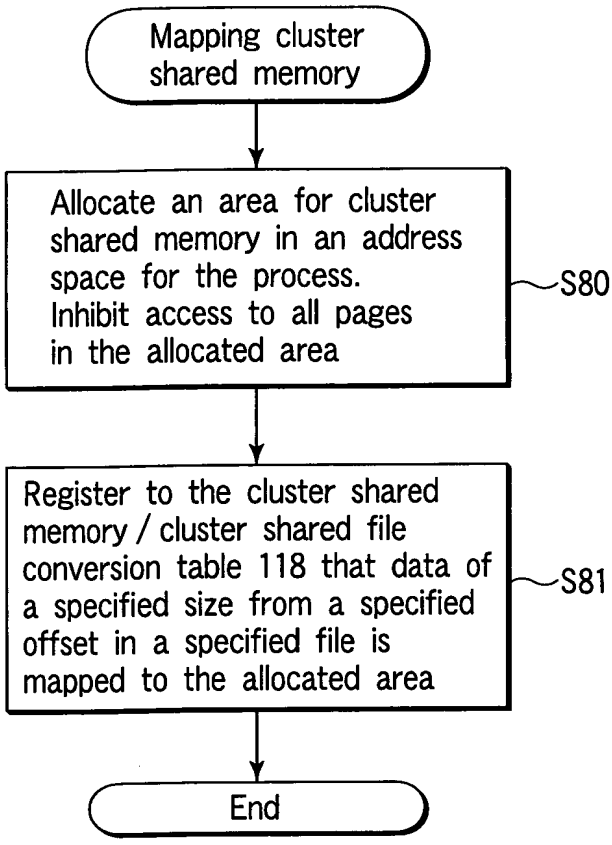




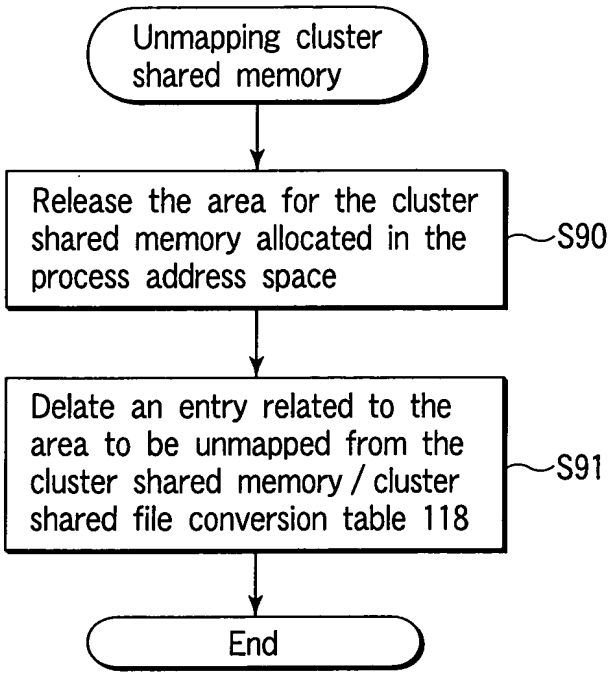
Accessing a cluster shared file by using cluster shared memory
Map a shared file to be accessed on shared memory
S70
S71
Lock acquired?
No
Yes
Access the shared memory
S72
Release the lock
S73
End

FIG. 7



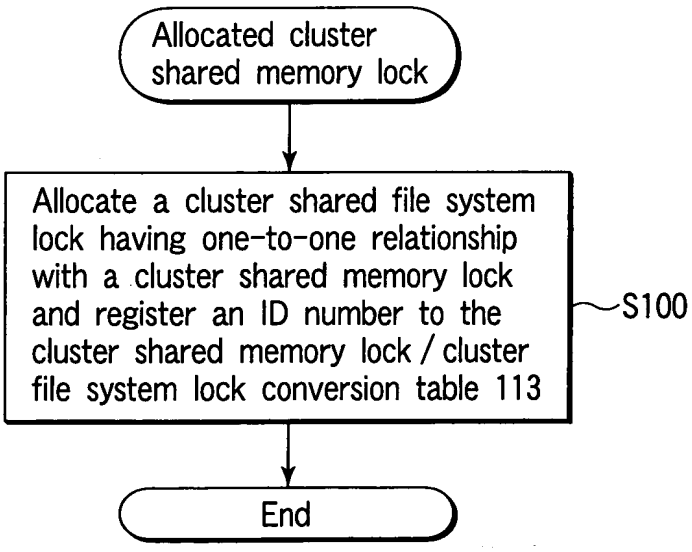
Mapping cluster shared memory
Allocate an area for cluster shared memory in an address space for the process. Inhibit access to all pages in the allocated area
S80
Register to the cluster shared memory / cluster shared file conversion table 118 that data of a specified size from a specified offset in a specified file is mapped to the allocated area
S81
End

FIG. 8



Unmapping cluster shared memory
Release the area for the cluster shared memory allocated in the process address space
S90
Delate an entry related to the area to be unmapped from the cluster shared memory / cluster shared file conversion table 118
S91
End

FIG. 9



Allocated cluster shared memory lock
Allocate a cluster shared file system lock having one-to-one relationship with a cluster shared memory lock and register an ID number to the cluster shared memory lock / cluster file system lock conversion table 113
S100
End
